RE: Sewer Utility Improvements - 2013

Dear Mr. Rivera:

As we discussed at our meeting on September 1, 2015, to the best of my knowledge the permitting, design, and construction of upgrades to lift stations I-B-01 (Bellview) and I-G-06 (Crosier) was not driven by an urgent need, or threat of imminent failure. As has been done with other old lift stations in the City over the years, the planned improvements to these stations can best be characterized as routine infrastructure upgrades. Recognizing that the City should always be flexible in setting its priorities for construction, I see no major problem with deferring construction of these two lift station upgrades until a later date.

Please let me know if you have questions or would like to discuss my thoughts regarding the prioritization of future system upgrades.

Sincerely,

Layne C. Cady, P.E.
President
